

# The Benefits of High Density Storage Units

In every kind of workplace it's the same story. All stand to benefit from better ways to organize, file, store, access and protect the things they need to function. Effective storage management means improved operations, greater productivity, higher quality and enhanced cash flow. By mounting storage units on wheeled carriages that run on tracks, high density systems eliminate the need for fixed aisles. You simply push a button or turn a handle to open an aisle where you want it.

## **CONVENTIONAL STORAGE**

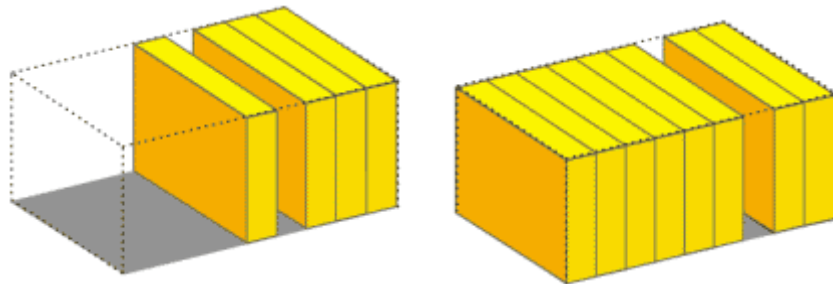

Conventional stationary storage units require space-wasting fixed aisles

CONVENTIONAL STORAGE

## **HIGH DENSITY STORAGE**

High density systems save **50%** of the floor space for other uses or double the capacity of the existing space.

HIGH DENSITY STORAGE

## **THE RESULT IS 100% GREATER STORAGE CAPACITY OR 50% SPACE REDUCTION.**

The economic benefits are substantial. In fact, the investment can be paid back in two years or less, and the savings go on year after year. Thomas Interior Systems has recommended **Spacesaver®** high density storage systems for projects in offices, hospitals, banks, libraries, schools, museums, archives, factories, warehouses, laboratories, and even military bases. By switching from lateral filing cabinets to a high density storage system, our clients will gain more space, or store more materials in the same amount of space. Either way, high density storage offers tremendous benefits.
